

**AMENDMENT TO THE CLAIMS**

Claim 1 (original): A method for indicating the user's name on a blood-sampling needle pen, including providing a see-through window on the housing of the blood-sampling needle pen, forming a media compartment inside of said housing, inserting a curled note indicating the user's name, the date, and/or the relevant data, etc. into the media compartment, and covering a bottom cap, thereby completing a personal blood-sampling needle pen such that confusion of the user can be avoid.

Claim 2 (original): The method for indicating the user's name on a blood-sampling needle pen according to Claim 1, wherein the housing with a see-through window is made from transparent materials.

Claim 3 (original): The method for indicating the user's name on a blood-sampling needle pen according to Claim 1, wherein providing the housing with a see-through window includes the provision of a hollow out frame on the housing such that the information indicated therein can be visible from outside.

Claim 4 (original): The method for indicating the user's name on a blood-sampling needle pen according to Claim 1, wherein the housing is made of transparent material, the media compartment can be a hollow chamber such that a curled note can be inserted thereinto and visible from outside.

Claim 5 (original): A method for indicating the user's name on a blood-sampling needle pen, including providing a see-through window on the housing of the blood-sampling needle pen, forming a media compartment inside of said housing, inserting a curled note indicating the user's name, the date, and the relevant data, etc. into the media compartment, covering a bottom cap, and mounting a dust cover on the top of the blood-sampling needle pen, thereby completing a personal blood-sampling needle pen such that user confusion can be avoid.

Claims 6-8 (cancelled)
